2) Community Noise Monitoring Monthly Summary

Units are weighted decibels (dBA) level

| Number of <br> Workdays in <br> a Month | Number of Noise <br> Monitoring Days <br> in a Month | Number of Days with Noise <br> Levels above Action Levels <br> by Month | Comments |
| :---: | :---: | :---: | :---: |
| $\mathbf{2 0}$ | $\mathbf{3 1}$ | $\mathbf{0}$ | Noise monitoring was performed during <br> weekkays and weekends. No construction- <br> related exceedances were recorded. |
|  |  |  |  |

Community Noise Monitoring Excursions and Corrective Actions
Action Level $=3 \mathrm{dBA}$ above background
Stop Work Level $=5 \mathrm{dBA}$ above background

| Date: Time | Maximum Noise Reading <br> before Corrective Action <br> (DBA) | Maximum Noise <br> Reading after <br> Corrective Action <br> (DBA) | Corrective Action |
| :---: | :---: | :---: | :---: |
| None to Date | No Exceedance | N/A | Noise monitoring was performed during <br> weekdays and weekends. No construction- <br> related exceedances were recorded. |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

Narrative Summary of Noise Monitoring, Excursions and Corrective Actions:

During the month of December 2023, noise monitoring devices were in continuous operation at the project site recording construction-related noise levels in units of (DBA). DBA levels did not surpass the Noise Limits identified by Local Law 113 during this month and did not cause noise concerns for the surrounding community. There were no notification triggers to the project management team or contractor specific to noise exceedances that could potentially impact the public or on-site workers.
The contractor, NorthStar Contracting Group, Inc. in conjunction with their environmental specialist, will implement mitigation techniques at Action Levels as well as Exceedances of Exposure Limits to suppress construction activity effects on Noise when warranted throughout the Project work-zone.
No corrective actions or mitigations measures were required this month.
3) Community Vibration Monitoring Monthly Summary

Units are inches per second (in/sec)

| Number of Workdays in <br> a Month | Number of Vibration <br> Monitoring Days in <br> a Month | Number of Days with <br> Vibration Levels <br> above Action Levels <br> by Month | Comments |
| :---: | :---: | :---: | :---: |
| $\mathbf{2 0}$ | $\mathbf{3 1}$ | $\mathbf{1 9}$ | No mitigation actions were required. Alerts <br> triggered manually during off hours as well <br> as during working hours. |

## Community Vibration Monitoring Excursions and Corrective Actions

Action Level $=0.50 \mathrm{in} / \mathrm{sec}$ peak particle velocity
Stop Work Level $=1.00 \mathrm{in} / \mathrm{sec}$ peak particle velocity

| Date: Time | Exceedance <br> Level Recorded <br> (in/sec) | Ambient Vibration <br> Level after Exceedance <br> Recorded <br> (in/sec) | Corrective Action |
| :---: | :---: | :---: | :---: |
| December 1, 2023; 15:37:04 | 0.640 | 0.011 | No deconstruction work taking place within <br> 90' of sensor, trigger could have been <br> rodents, heavy footsteps on metal cover <br> plates, or debris from street falling into <br> shaftway. |
| December 1, 2023; 17:50:08 | 0.988 | 0.011 | No deconstruction work taking place within <br> 90' of sensor, trigger could have been <br> rodents, heavy footsteps on metal cover <br> plates, or debris from street falling into <br> shaftway. |
| December 5, 2023; 09:55:22 | 0.876 | 0.032 |  |
| December 6, 2023; 11:42:22 |  |  | 0.015 |

| December 31, 2023; 07:55:47 | 0.749 | 0.022 | No work taking place; no corrective action <br> necessary |

Narrative Summary of Vibration Monitoring, Excursions and Corrective Actions:
Vibration monitors were installed within the MTA subway tunnel and in front of the Brooklyn Criminal Courthouse on State Street, to monitor vibrations during the dismantling of the Brooklyn Detention Center. The monitors in the subway tunnels were not activated, as the vibrations from train movements were determined to overwhelm or obscure the vibrations from the dismantling work. The monitor in front of the Courthouse was located in an access shaft in the sidewalk, under 2 metal hatch doors. The monitor is a highly sensitive instrument, so it records vibrations from heavy impact from footsteps, scooters, etc. on the metal access shaft cover plates, bits of debris dropped down the shaftway, rainfall, etc. as well as potential vibrations from the deconstruction across the street. Furthermore, the deconstruction work is greater than $90^{\prime}$ away from the monitor, so allowing for dissipation of any vibration over distance, the source of the exceedances is more likely to be local than from that distance. Therefore, many of the exceedances recorded are discounted as being due to other factors than the dismantling. During the month of December 2023, vibration monitoring was ongoing throughout the entire month at the project site and vibration monitoring devices were in continuous operation at the project site recording construction-related vibration levels measured in inches per second (in/sec) or IPS. Throughout the month of November, action-level vibration threshold exceedances and stop-work level vibration exceedances were recorded above the Daily Permissible Exposure Limits (IPS) during this month as set by Action Levels $=0.5 \mathrm{in} / \mathrm{sec}$ above backgrounds and Stop Work Levels $=1.0 \mathrm{in} / \mathrm{sec}$ above backgrounds. These alerts were recorded during off hours when no work was taking place on site. No work was taking place within 90-feet of the vibration monitoring equipment when action level and stop-work level exceedances were recorded.
The contractor, NorthStar Contracting Group, Inc. in conjunction with their environmental specialist, will implement mitigation techniques at Action Levels as well as Exceedances to suppress construction activity effects that causes Vibration when warranted throughout the Project work-zone.

No corrective actions or mitigations measures were required this month as the alerts were triggered due to manual disturbance of the sensor during off hours as well as during work hours.

[^0]:    Narrative Summary of Air Monitoring, Excursions and Corrective Actions:
    During the month of December 2023, air monitoring devices were in continuous operation at the project site recording construction-related levels of Particulate Matter (PM). PM10 levels did not surpass Daily Permissible Exposure Limits (PEL) during this month as set by federal standards for the 24-hour Time Weighted Average (TWA), or daily value and did not trigger notifications to the project management construction team or contractor specific to air quality exceedances that could potentially impact the public or on-site workers.
    The contractor, NorthStar Contracting Group, Inc. in with their environmental specialist, will implement mitigation techniques at Action Levels as well as Exceedances of Exposure Limits (15-minute TWA) to suppress construction activity effects on air quality when warranted throughout the Project work-zone.
    No corrective actions or mitigations measures were required this month.
